

Address: Telefónica O2 Czech Republic
Vyskočilova 1442/1b
140 21 Praha 4
The Czech Republic

24 January, 2011

To whom it may concern,

It is my pleasure to recommend SIRADEL to you. SIRADEL's know-how in map data for wireless industry, especially for network planning/optimization is very good.

Telefónica O2 Czech Republic has been using SIRADEL's high resolution models of ten biggest cities since 1998. These models are not only useful for improving the accuracy of RF propagation modeling, but their very precise modeling of building heights is also very useful for fast pre-selection of new position of sites.

Our company also uses propagation software VOLCANO which is also SIRADEL's product. This tool predicts the wireless coverage in both small and large areas. According to our evaluation, this model much better corresponds to the reality than the standard propagation models based on Okumura-Hata.

Thanks to SIRADEL's involvement in wireless planning, they know rightly the format and overall quality of map data needed for the major industrial software tools. The professional and prompt commercial and technical support is another point that we highly appreciate.

Telefónica O2 Czech Republic and SIRADEL have maintained a long and very good relationship since around 12 years ago. The discussions and exchanges are beyond VOLCANO and Map Data products. SIRADEL's research and development in wireless benefits us a lot in improving the quality of our network.

Therefore, I endorse my recommendation here.

A handwritten signature in blue ink, reading "Michal Steuer". The signature is fluid and cursive, with a long horizontal stroke at the end.
